

2draw.net and Lascaux Sketch

Marcello Bastea-Forte

2draw.net & Lascaux Sketch Presented by Marcello Bastea-Forte*, Undergraduate Senior in Computer Science, Vincent Cheng*, Undergraduate Senior in Computer Science, Art & Art History

This paper discusses the project 2draw.net from its inceptions, growth, and future.

2draw.net is an Internet-based collaborative drawing community designed and created by Marcello Bastea-Forte and Vincent Cheng. It allows people from all over the world to draw online and submit the artwork that they create. Anyone can browse and critique the work of others providing feedback and suggestions.

Lascaux Sketch is a full-featured Java-based drawing application with many features found in software such as Adobe Photoshop. This tool was created by Marcello Bastea-Forte for use in 2draw.net.

This oral presentation will discuss the development of the art community web site, 2draw.net, through its three versions: the original site that began in 2002, the remake in 2003 with classmate Vincent Cheng, and the designs for a third version currently being developed. The presentation will also discuss the integrated software program, Lascaux Sketch. After the presentation, we will do a live demonstration.

Visit 2draw.net on the web at <http://2draw.net/>
