Question 1: Primitive Types

In Java, the keywords byte, short, int, long, float, double, boolean and char are:

- A primitive types
- B object types
- C variables
- D math operators
- E relational operators

Question 1: Primitive Types

In Java, the keywords byte, short, int, long, float, double, boolean and char are:

A primitive types

B object types

C variables

D math operators

E relational operators

Question 2: Bytecode

What is Java Bytecode?

A Machine code for a Java Virtual Machine.

B Machine code for the particular machine on which the Java source code was compiled.

C The binary code Java uses to store bytes.

D The hexadecimal code Java uses to store bytes.

E A device that bites, chews and spits Java code.

Question 2: Bytecode

What is Java Bytecode?

A Machine code for a Java Virtual Machine.

B Machine code for the particular machine on which the Java source code was compiled.

C The binary code Java uses to store bytes.

D The hexadecimal code Java uses to store bytes.

E A device that bites, chews and spits Java code.

Question 3: Variable Declaration

Which is the best variable declaration for the number of people in your family?

A `boolean foo;`

B `boolean familyMemberCount = 1;`

C `int familyMemberCount = 1;`

D `float familyMemberCount = 1;`

E `double familyMemberCount = 1;`

Question 3: Variable Declaration

Which is the best variable declaration for the number of people in your family?

A `boolean foo;`

B `boolean familyMemberCount = 1;`

C `int familyMemberCount = 1;`

D `float familyMemberCount = 1;`

E `double familyMemberCount = 1;`
