Overview

- ▶ This is designed to look like the tango-dark color theme, which I use in Emacs.
- ▶ I just pulled most of the colors directly from the color theme file.

Customization

You'll **definitely** want to customize this class as things like my name in the footer are hard coded.

First slide B

I actually define the class in an external latex file, and then use the following to load it.

From my Init file

```
(add-to-list 'org-latex-classes
  '("presentation"
    ,(with-temp-buffer
      (insert-file-literally "presentation.tex")
      (buffer-string))
    ("\\section{%s}" . "\\section*{%s}")
    ("\\subsection{%s}" . "\\subsection*{%s}")
    ("\\subsubsection{%s}" . "\\subsubsection*{%s}")
    ("\\paragraph{%s}" . "\\paragraph*{%s}")
    ("\\subparagraph{%s}" . "\\subparagraph*{%s}")))
```

Table of Contents

First Half

Second Half

Second slide A

It uses the listings package for code highlighting.

```
int main(int argc, char *argv[])
{
    printf("hello world\n");
    return 0;
}
```

Second slide B

Thanks

Hope this is useful.
