

# COGNITIVE SCIENCE

The Science of Intelligent Systems

GEORGE F. LUGER

with Peder Johnson, Carl Stern, Jean E. Newman, and Ronald Yeo

1994 - Academic Press

# Contents

Preface ix

## Part I

### INTRODUCTION TO COGNITIVE SCIENCE

- 1 Intelligence and the Roots of Cognitive Science 3
- 2 Vocabularies for Describing Intelligence 41
- 3 Representational Schemes 75
- 4 Constraining the Architecture of Minds 111
- 5 Natural Intelligence: Human Brain Function 143

## Part II

### SYMBOL BASED REPRESENTATION AND SEARCH

- 6 Network and Structured Representation Schemes 181
- 7 Logic Based Representation and Reasoning 217
- 8 Search Strategies for Weak Method Problem Solving 255
- 9 Using Knowledge and Strong Method Problem Solving 295

## Part III

### MACHINE LEARNING

- 10 Explicit Symbol Based Learning Models 335

- 11 Connectionist Networks: History, the Perceptron,  
and Backpropagation 381
- 12 Competitive, Reinforcement, and Attractor  
Learning Models 407

**Part IV**

**LANGUAGE**

- 13 Language Representation and Processing 457
- 14 Pragmatics and Discourse 489

**Part V**

**BUILDING COGNITIVE REPRESENTATIONS  
IN PROLOG**

- 15 PROLOG as Representation and Language 517
- 16 Creating Meta-Interpreters in PROLOG 549

**Part VI**

**EPILOGUE**

- 17 Cognitive Science: Problems and Promise 587
