CS-152: System.out.println

Neal Holtschulte

June 4, 2013
The following line of code causes the text “Hello, World” to be printed to the console.

```
System.out.println("Hello, World");
```
Objects and methods

The **nouns** of a programming language are called **objects**.

The **verbs** of a programming language are called **methods**.
Objects and methods

System is an object.
out is an object held by the System object
println is a method that can be performed by
the object System.out
Dot “.” is a separator between names of
objects and methods.
Parentheses indicate a method call and
contain any arguments to the method.

```java
System.out.println("Hello, World");
```
Demonstrate Eclipse’s autocomplete feature by typing in System. and System.out.
